CZECHOSLOVAKIA

Estimated Urban and Other Population

The attached table gives the population of Czechoslovakia by first-order administrative unit (the kraj, or region) and by city, classified as urban -- that is, population in urban areas of 50,000 or more inhabitants within a 5-mile radius of the center -- or "other", including all population outside the 5-mile radius. The estimates for the kraje and city centers are based on 1958-59 data given in Statistická Ročenka Republiky Československé 1959 (Prague, 1959). Estimates for the urban peripheral areas outside the city limits but within the 5-mile radius are based on 1948 data because none more recent are available. Three cities -- Prague, Bratislava and Brno -- extend beyond the 5-mile radius.

The total population of Czechoslovakia, according to the 1958-59 estimates, is 13,469,000. Of this total the urban population, as defined above, is 3,381,000, the remainder (10,088,000) constituting all population outside the cities.

In the table (see p. a-5), each city is listed under the kraj in which it was located in 1959. These kraje are shown on map 27742.1 which was in OSI report MR-43, 24 July 1959. The following list gives the grouping of cities and kraje according to the administrative changes of 1960. Map 29263 shows the 1960 kraj boundaries. It is not possible, however, to adjust the 1958-59 population data to the 1960 administrative units.

HUNGARY

Estimated Urban and Other Population

The attached table gives the population of Hungary by first-order administrative unit (the megye, or county) and by city, classified as urban -- that is, population in urban areas of 50,000 or more inhabitants within a 5-mile radius of the center -- or "other", including all population outside the 5-mile radius. The estimates for the counties and city centers are based on data of 1 January 1957 given in Magyar Statisztikai Zsebkönyv 1958 (Budapest, 1958), and, for five of the larger cities, on data of the census of 1 January 1960. Estimates for the urban peripheral areas outside the city limits but within the 5-mile radius are based on data from the 1949 census because none more recent are available. Budapest is the only city extending beyond the 5-mile radius.

The total population of Hungary, is estimated at 9,901,000. Of this total the urban population, as defined above, is 3,450,000, the remainder (6,451,000) constituting all population outside the cities.

POLAND

Estimated Urban and Other Population

The attached table gives the population of Poland by first-order administrative unit (the województwa, or province) and by city, for cities of 50,000 or more inhabitants. For each city the population of the surrounding second-order administrative unit (the powiat, or county) is indicated. This is termed the "peripheral" population. The remainder of the population of each province is termed the "other" population. Urban complexes of two or more adjacent large cities are indicated by appropriate groupings and sub-totals are given for such groupings. In a few cases cities of fewer than 50,000 inhabitants are included if they form part of an urban complex. The estimates are based on data of 31 December 1958 given in Rocznik Statystyczny 1959 (Warsaw, 1959).

The total population of Poland as of December 1958 is estimated at 28,997,000. This total is divided as follows: city, 7,236,000; peripheral, 2,807,000; city and peripheral, 10,043,000; other, 18,954,000.

RUMANIA

Estimated Urban and Other Population

The attached table gives the population of Rumania by first-order administrative unit (the regiune or region) and by city for cities of 50,000 or more inhabitants. For each city listed, the population of its surrounding second-order administrative unit (the raion) is also given under the heading "peripheral". The two categories -- city and peripheral -- are included in the total for urban population. The remainder of the population for each region is given under the heading "other". The estimates are based on data of 1 July 1958, given in Anuarul Statistic al R. P. R. 1959 (Bucharest, 1959) for the regions and cities, and on the census of 21 February 1956 for the peripheral figures.

The total population of Rumania is estimated to be 18,059,000. The break-down is as follows: city, 2,916,000; peripheral, 1,546,000; city and peripheral, 4,462,000; other, 13,597,000.
